REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: None of the prior art of record teaches or suggests a system for making containers having source for providing a continuous stream of molten plastic, a cutter coupled to the source for severing a continuous series of individual mold charges from the continuous stream, a compression molder including a plurality of compression molds arranged in a continuous series and a blow molder including a plurality of molds arranged in a continuous series for receiving the preforms in sequence and a common drive for coordinating continuous and synchronous operation of the source, the cutter, the compression molder and the blow molder. The closest prior art Saito discloses a compression molding apparatus for forming parisons comprising an extruder, a cutter, a series of compression molds on a wheel and that the preforms are subsequently blow molded, but the reference fails to disclose or suggest a common drive for the continuous and synchronous operation of the source, cutter, compression molder and the blow molder. In regards to the method, none of the prior art teaches providing a continuous stream of molten plastic, cutting the stream into individual charges, transferring the mold charges in sequence to a series of compression molds, compression molding a series of preforms, transferring the series of preforms in sequence to a continuous series of blow molds, blow molding the series, removing the containers and operating each of the steps in synchronism to provide a continuing series of blow molded containers from the molten plastic stream.
